

MOBILE · ANDROID

Sign in

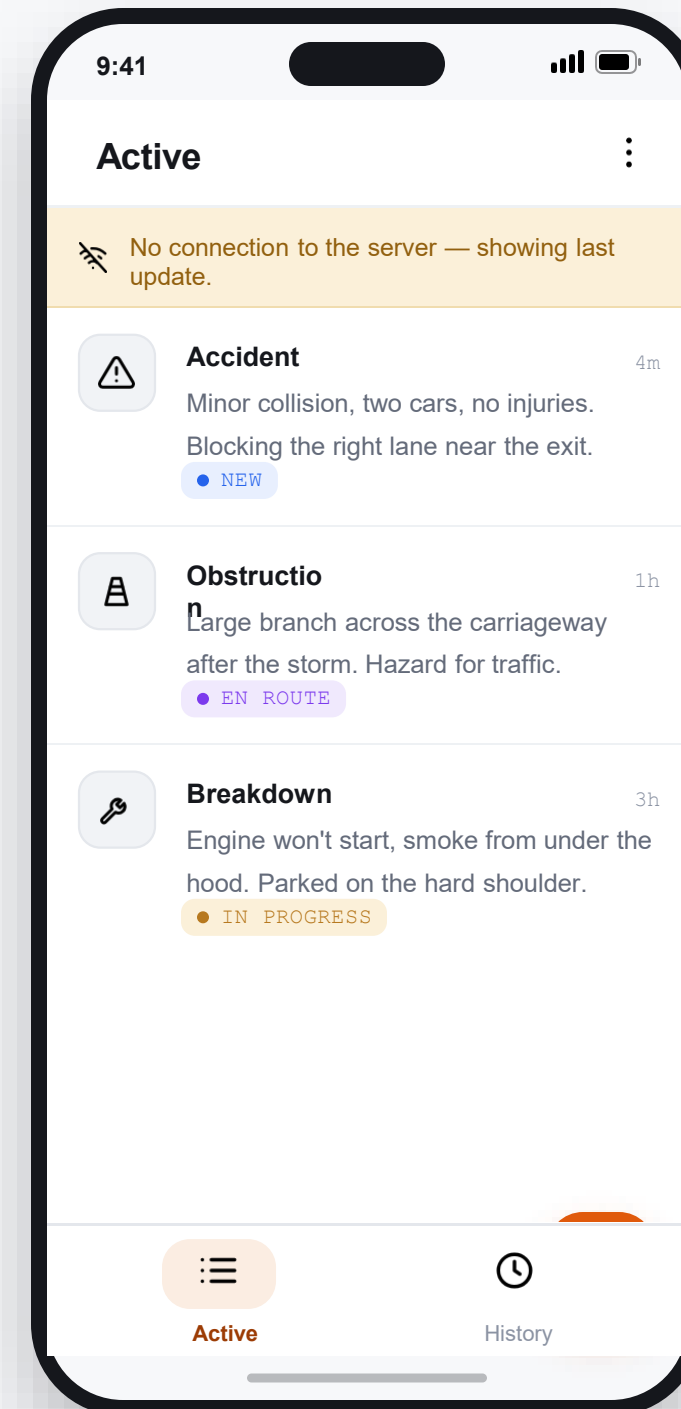

A shared sign-in for road users and dispatchers. The session stays active on the device, so reporting help is always one tap away.

MOBILE · ANDROID

Active incidents

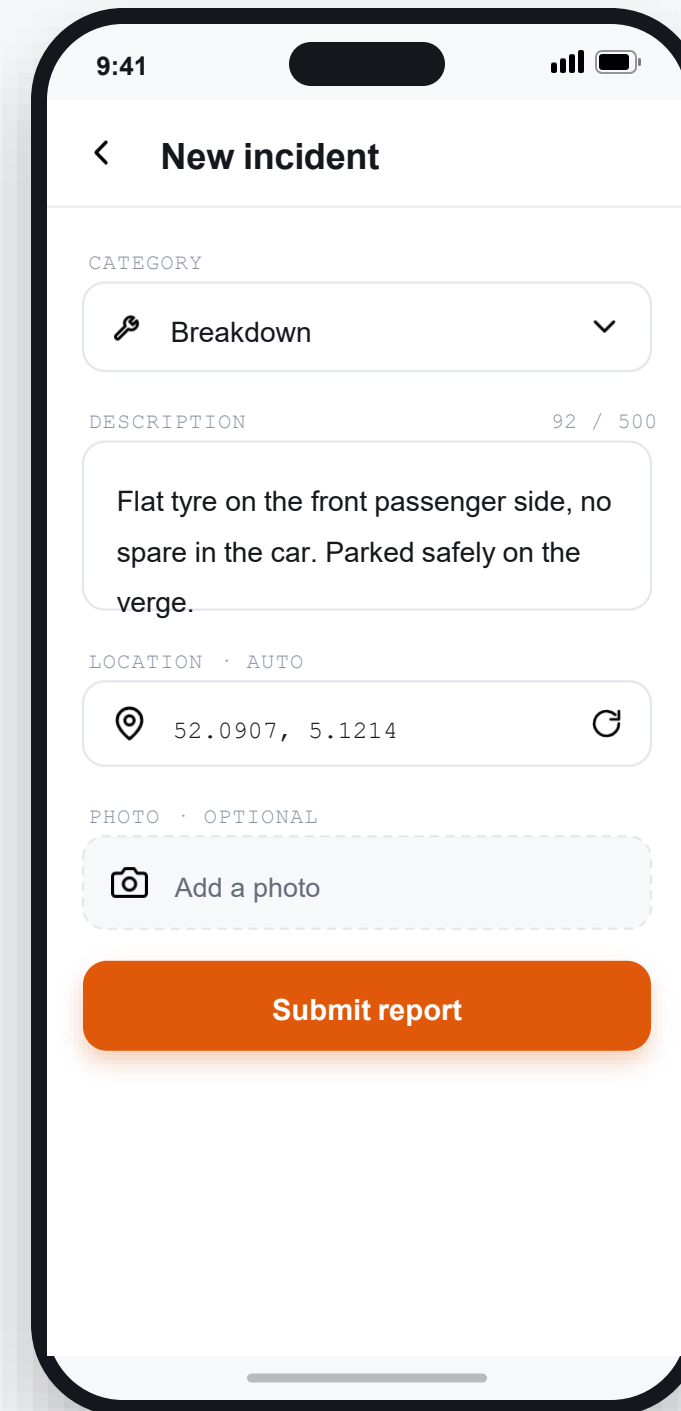

The road user's live incidents, newest first — with an offline banner when the connection drops. The + button starts a new report.

MOBILE · ANDROID

New incident

Reporting a breakdown: a category, a short description, auto-captured GPS location and an optional photo.

The image shows a mobile app interface for reporting a new incident. The screen is titled "New incident" with a back arrow. It features several input fields: a "CATEGORY" dropdown menu with "Breakdown" selected, a "DESCRIPTION" text area with the text "Flat tyre on the front passenger side, no spare in the car. Parked safely on the verge." and a character count "92 / 500", a "LOCATION" field with coordinates "52.0907, 5.1214" and a "G" icon, and a "PHOTO" field with a camera icon and the text "Add a photo". At the bottom, there is an orange "Submit report" button.

Submit report

MOBILE · ANDROID

Incident & activity

The road user follows their incident — current status, the latest message from dispatch, and a full activity timeline of every update.

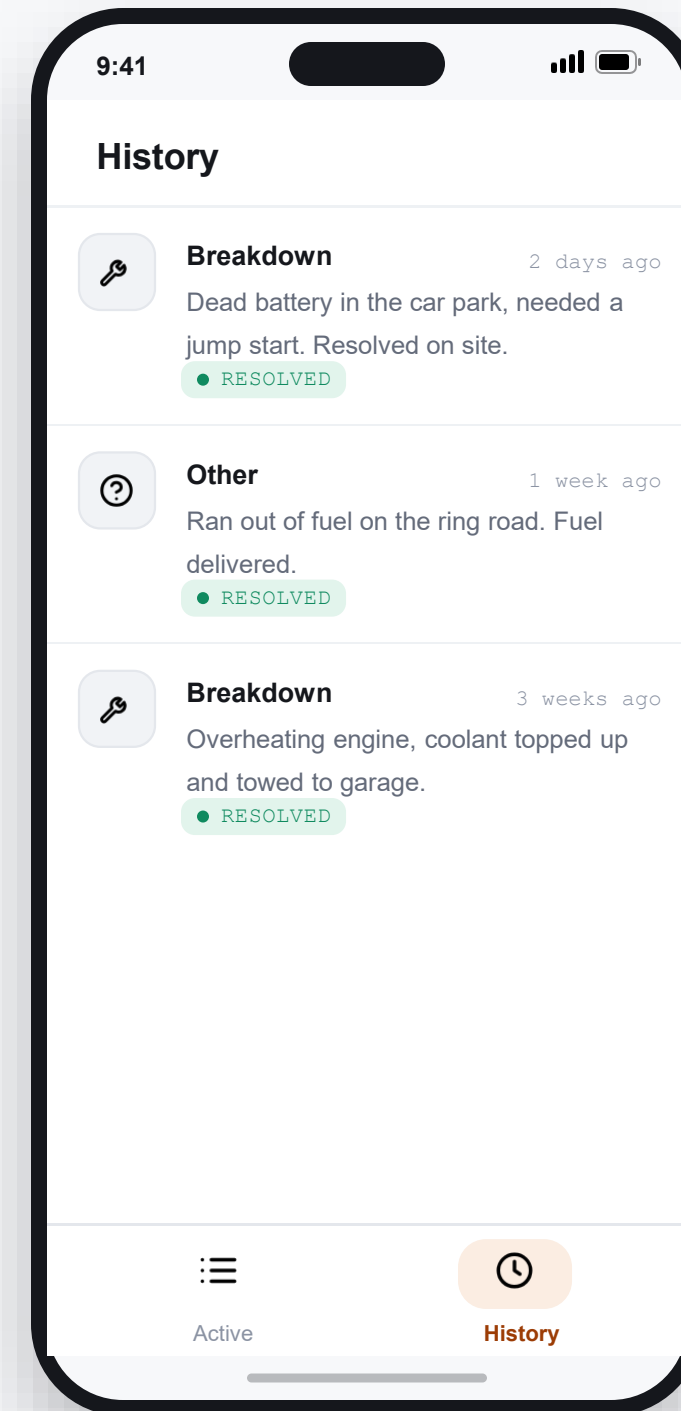

ROADASSIST

MOBILE · ANDROID

History

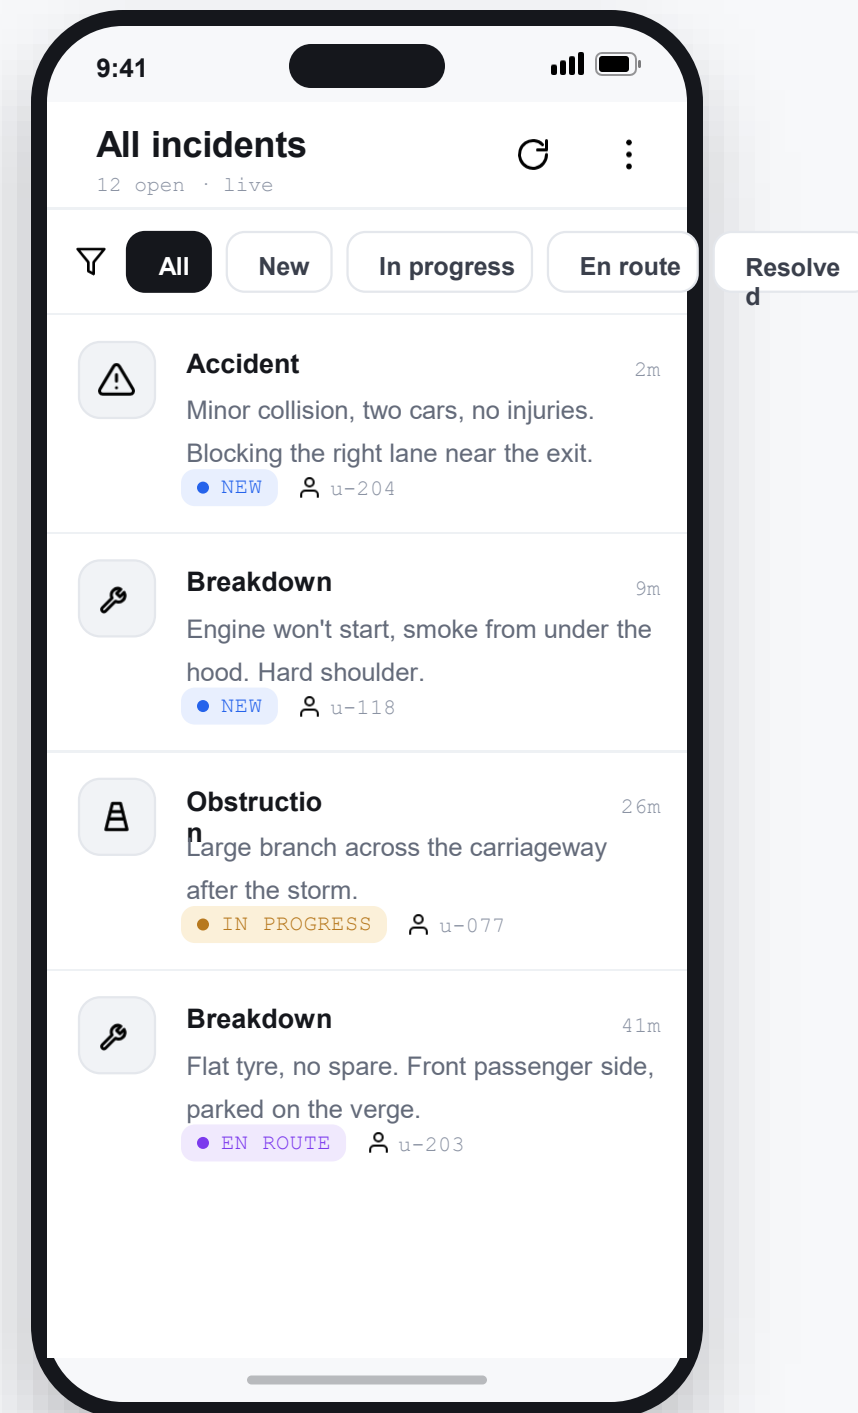

Past incidents, all resolved, kept for the road user's reference.

MOBILE · ANDROID

Dispatcher queue

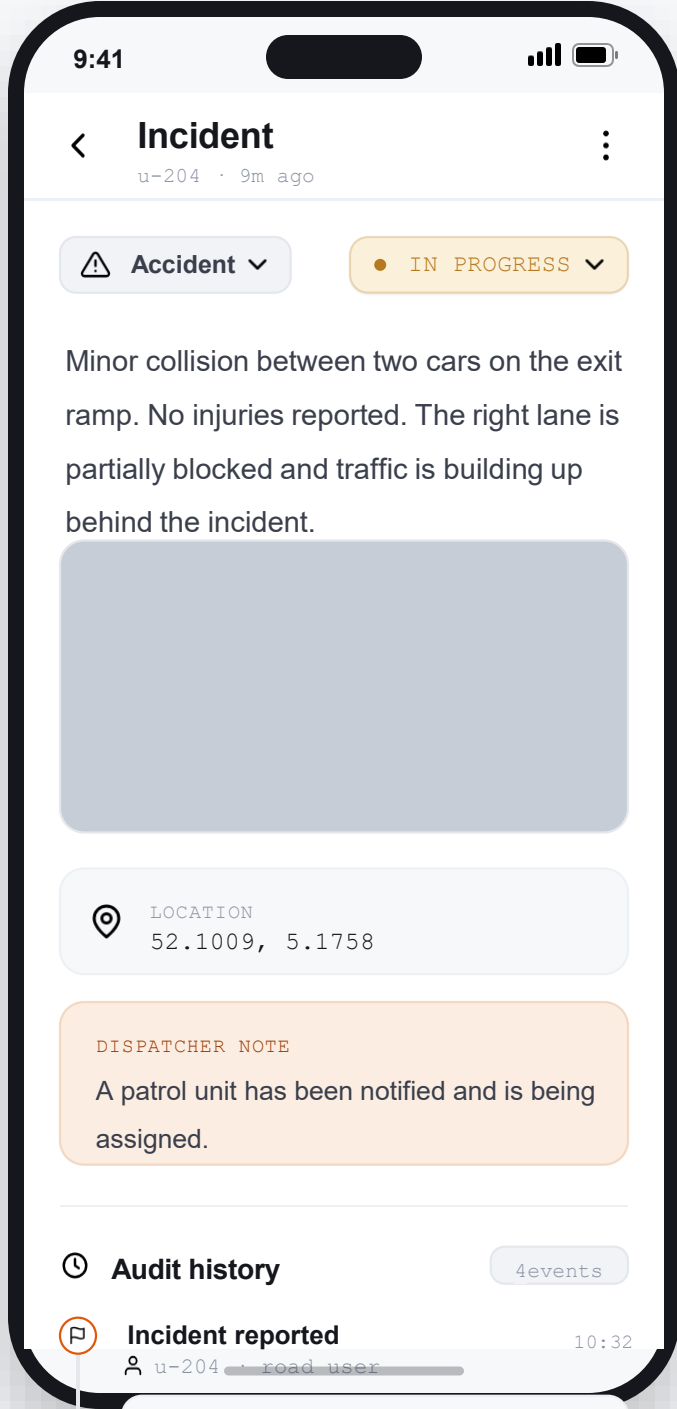

The dispatcher's triage queue: every open incident with its reporter, filterable by status and category.

MOBILE · ANDROID

Detail & audit history

The read view plus a complete audit history of who changed what, and when. The category and status are tappable to change them.

Submitted with photo and GPS location.

Vos dispatcher

MOBILE · ANDROID

Tap status → update

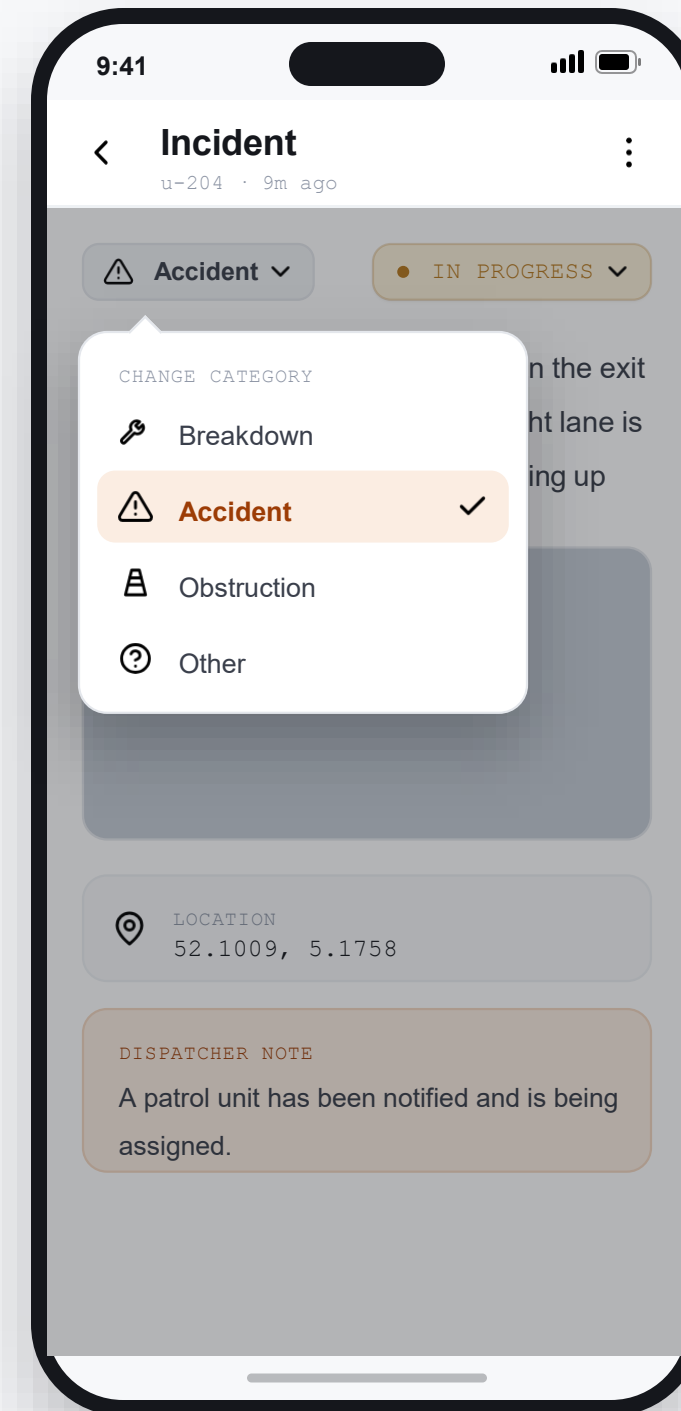

Tapping the status opens a popup to set a new status and send a note to the road user — every change is logged to the audit history.

MOBILE · ANDROID

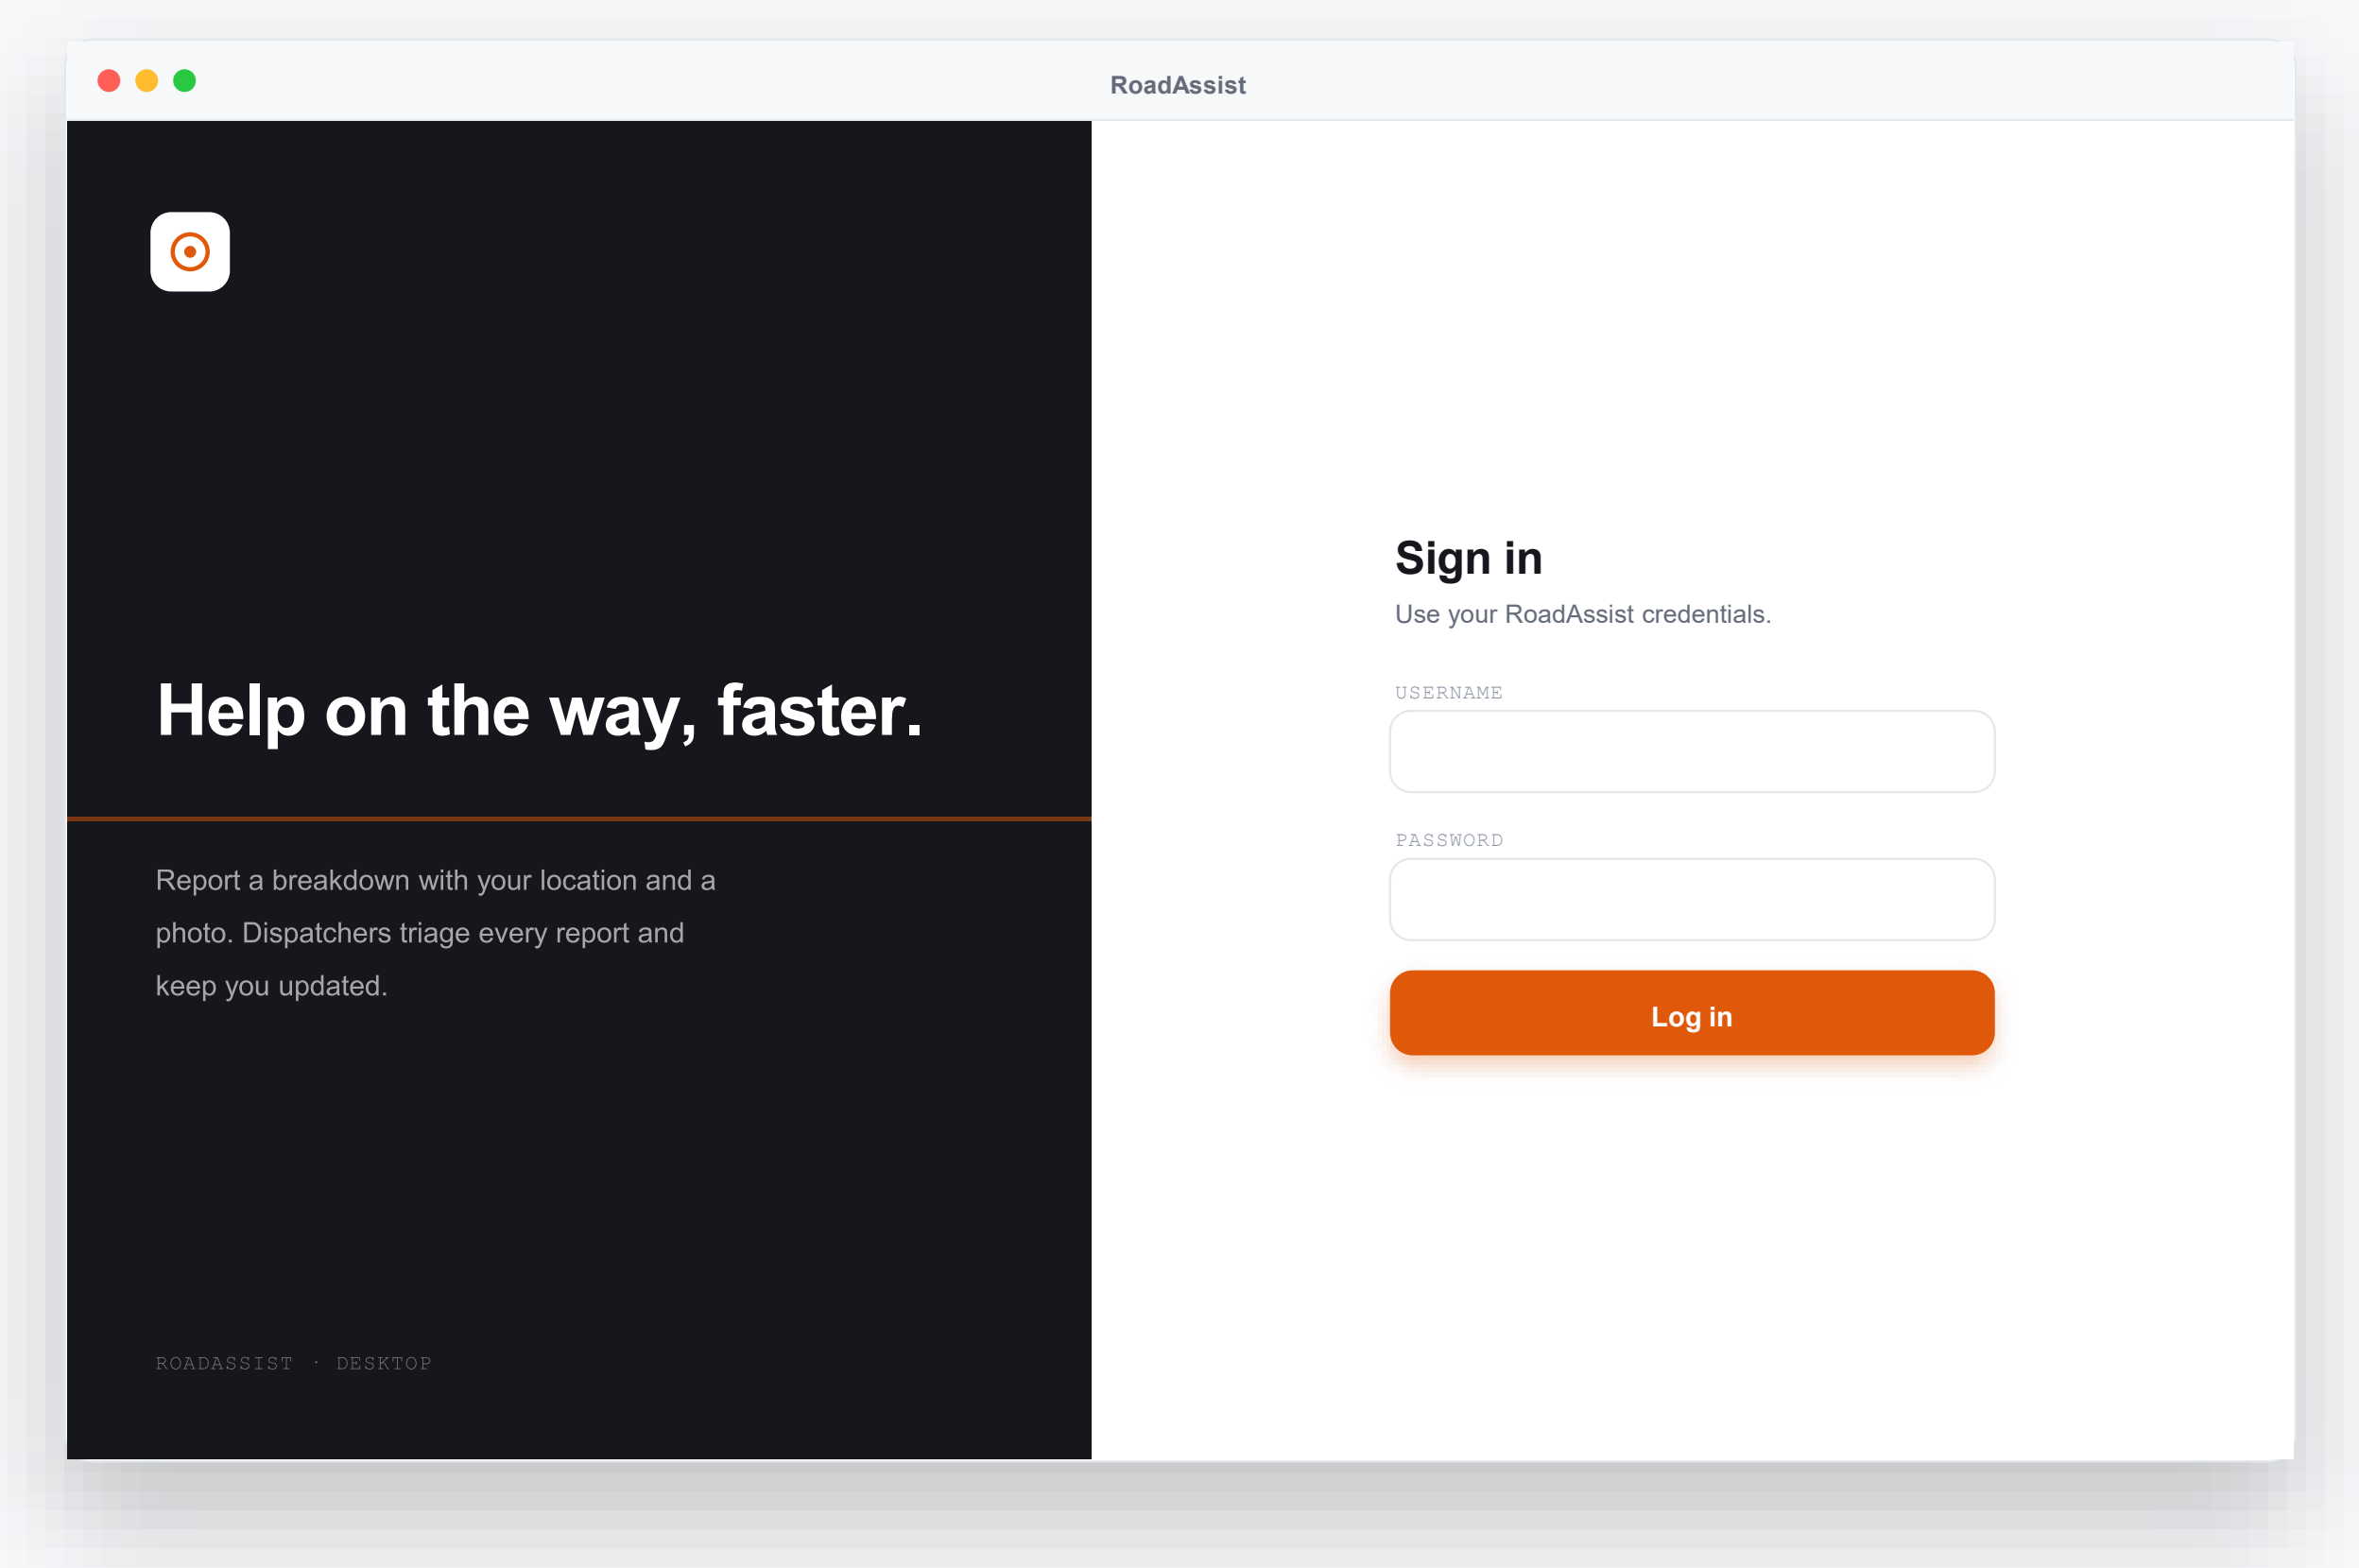

Tap category → re-classify

Tapping the category opens a dropdown so the dispatcher can re-classify an incident.

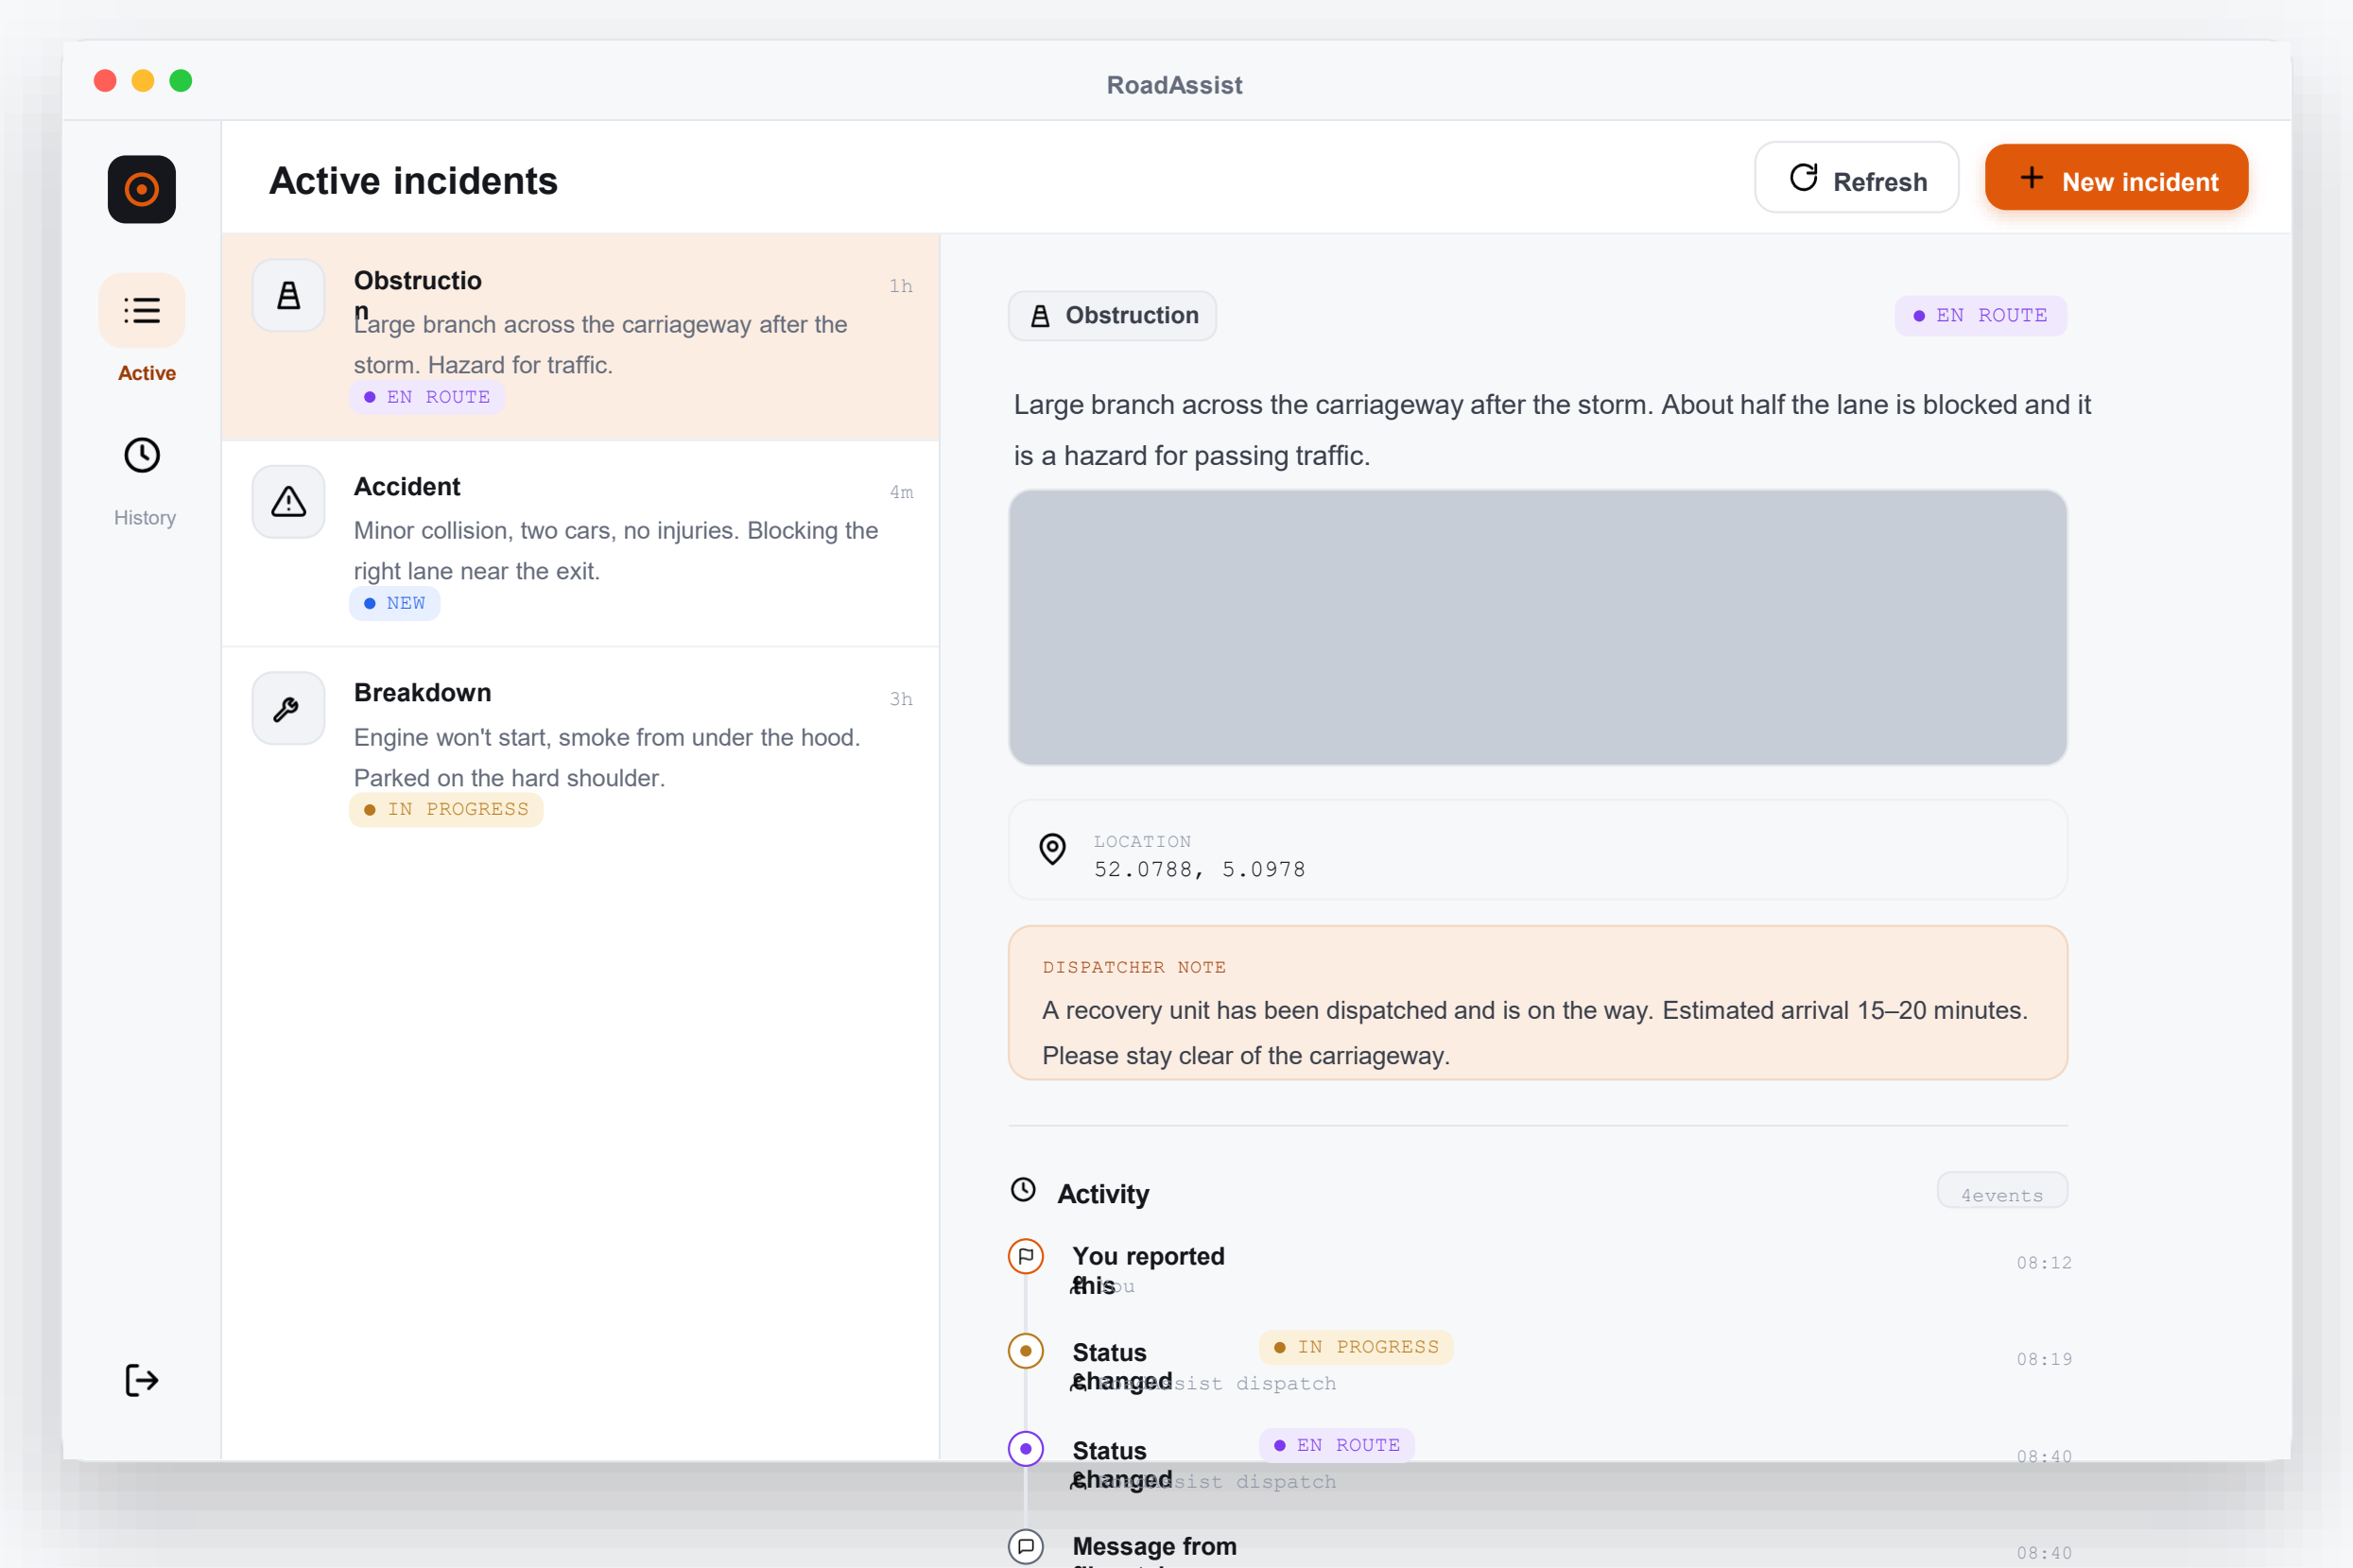

Sign in

The expanded sign-in pairs the report-to-resolution promise with the credential form.

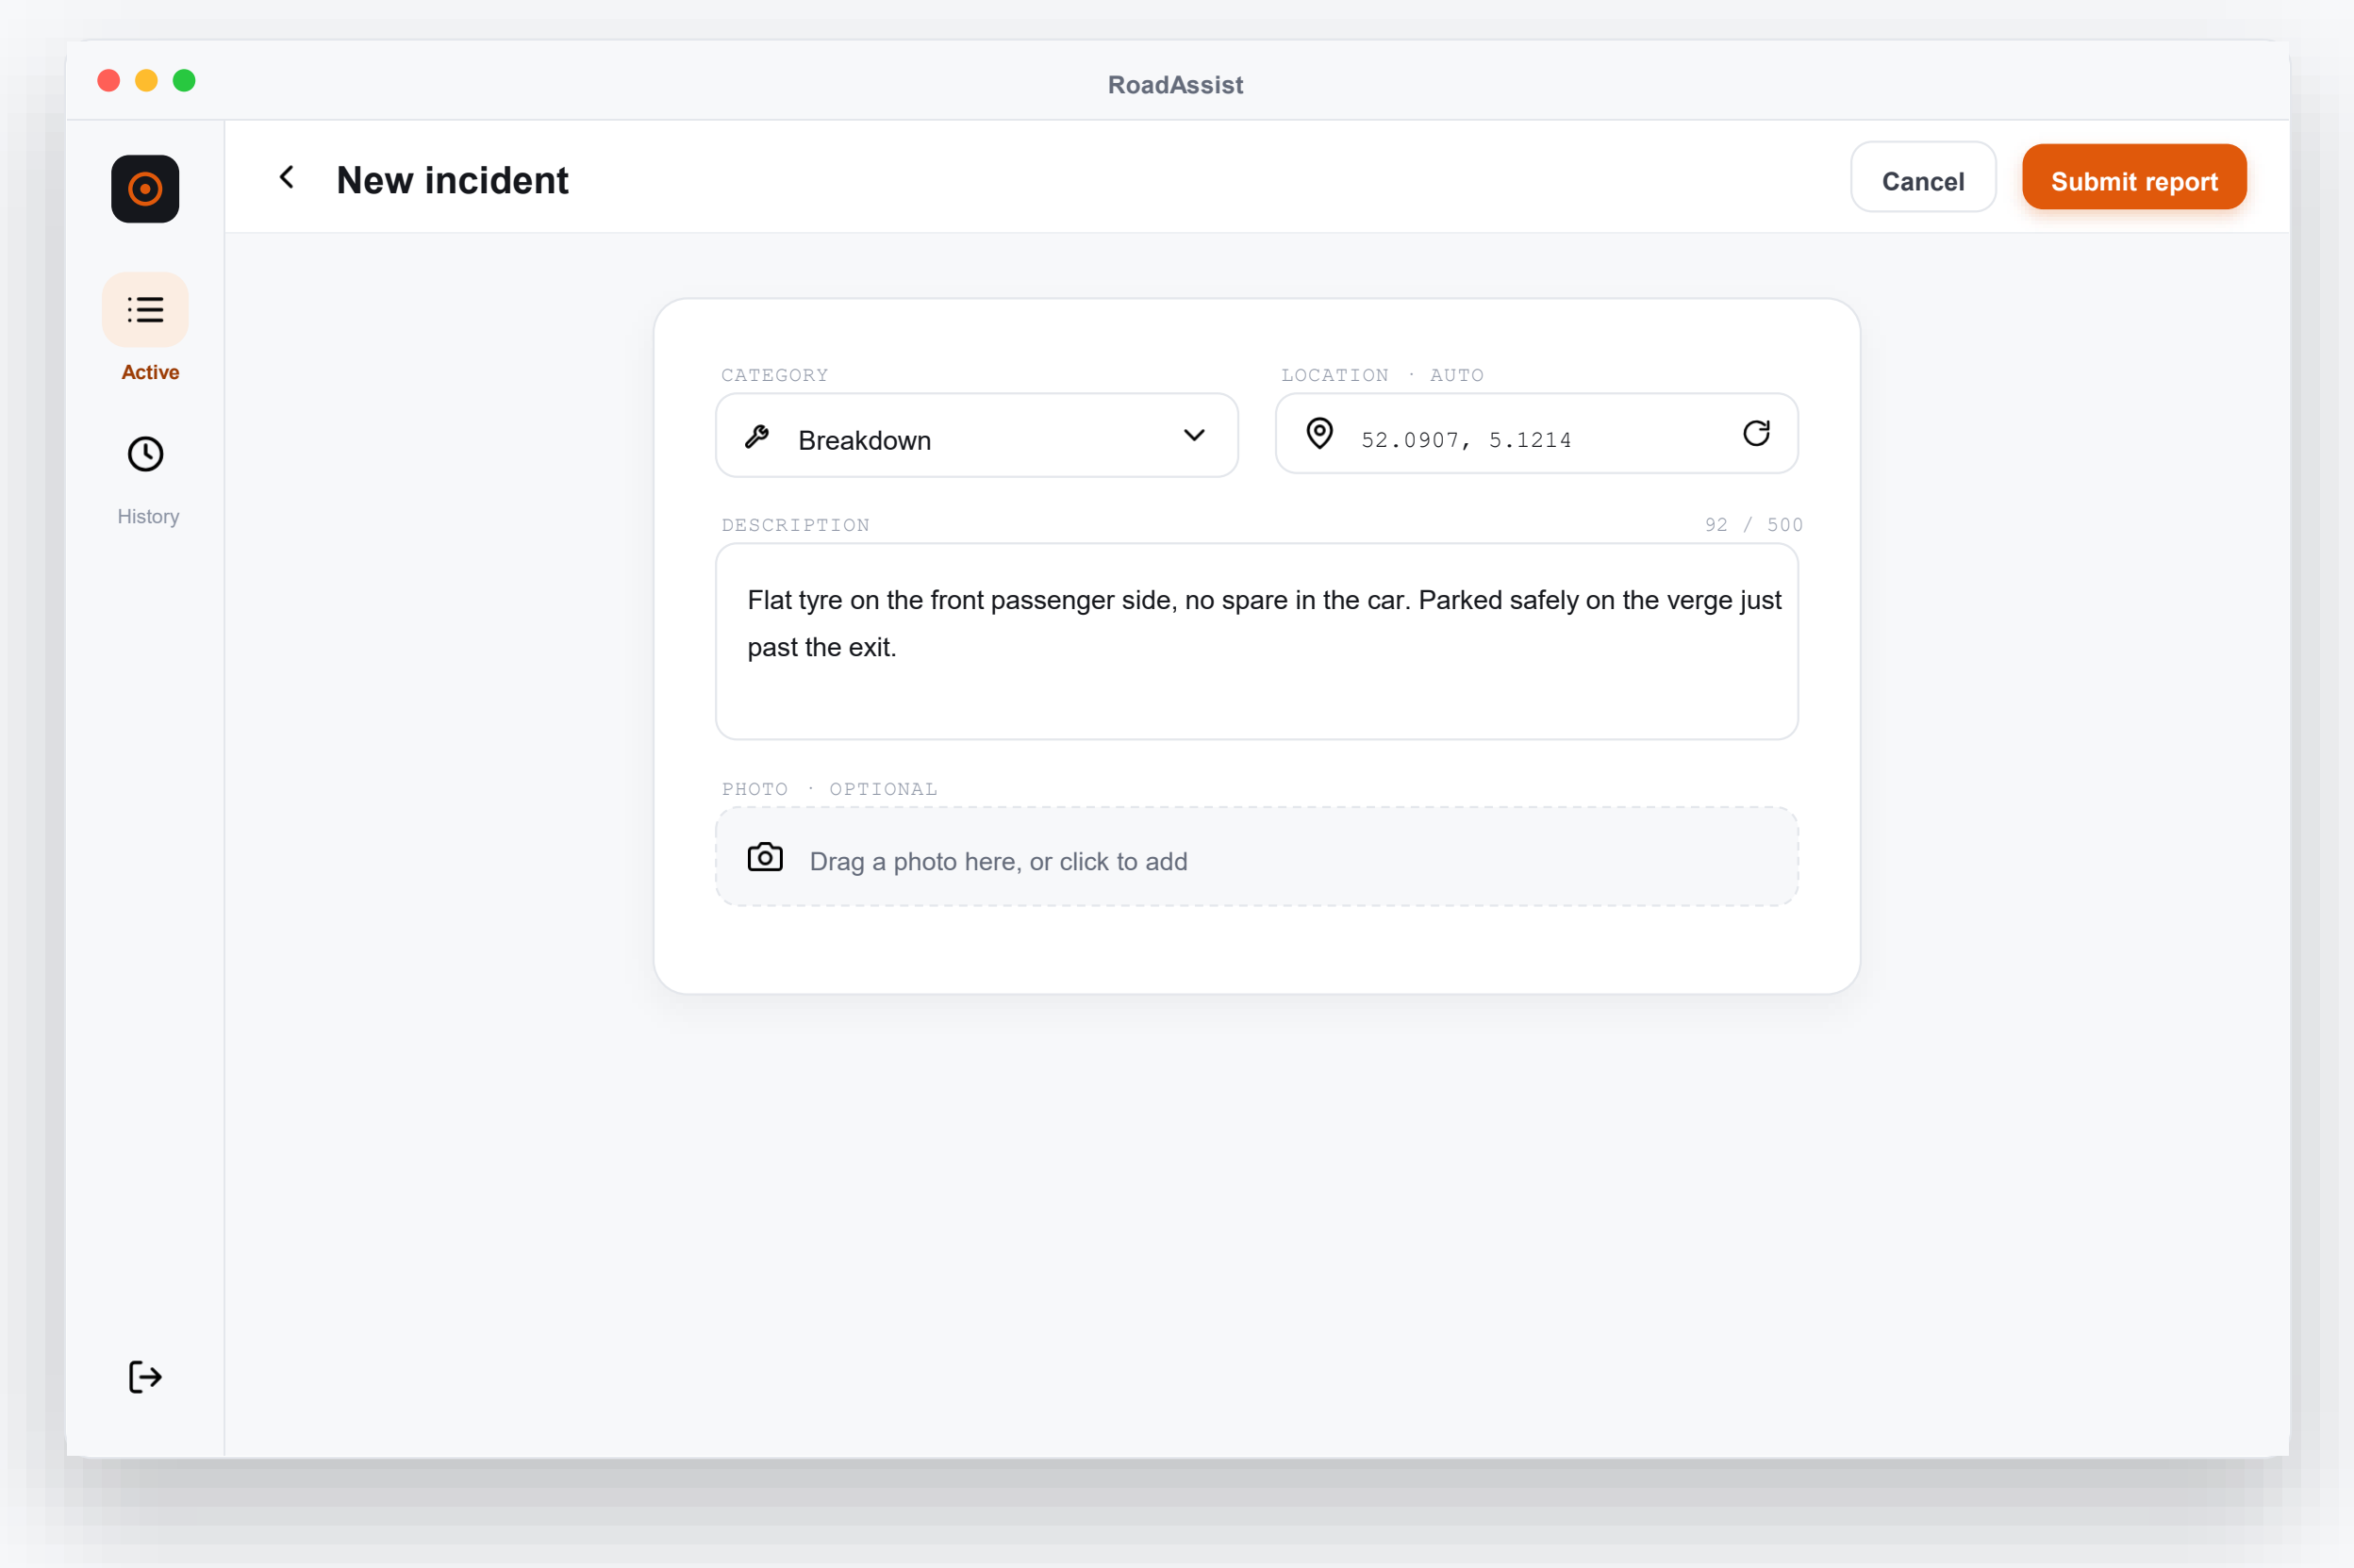

Active incidents — Road user

On desktop the road user gets a navigation rail and a list–detail split, with the activity timeline alongside the incident.

New incident — Road user

Reporting scales up to a centered form with category and location side by side.

History — Road user

Resolved incidents in a list–detail split, each showing its full audit history.
